

An-Chi Liu

SENIOR SOFTWARE ENGINEER · AI PLATFORMS, RAG & CLOUD-NATIVE INFRASTRUCTURE

Taiwanese, based in Tokyo, Japan (Permanent Resident)

✉ phy.tiger@gmail.com | 🏠 tigercosmos.xyz | 📱 tigercosmos | 🌐 liuanchi

Summary

Starts platforms from zero and gets them adopted: delivered T2's company-wide **evaluation and QA platform**, a 12-engineer-month plan, in **6 months** on a hybrid of on-premises GPU Kubernetes and GCP VMs; co-founded an **LLM/RAG product**. Hands-on in Go, Python, and C++: **second-largest contributor** to a C++ numerical toolkit (255 merged PRs), **core maintainer** of a 3.1k-star networking library. **AI-driven workflow**: architecture by hand, implementation by coding agents, human review plus CI and sanitizers gating every merge.

Work Experience

T2, Inc. (L4 Autonomous Trucking)

Senior Software Engineer

Tokyo, Japan
Nov. 2025 – Present

- **Conceived, proposed, and delivered** a company-wide **evaluation and QA platform** from zero: design, budget, adoption. Shipped a **12-engineer-month plan in 6 months** over 7 major releases; 3,000+ simulation jobs to date.
- Chose a **hybrid on-premises and cloud architecture** over pure cloud: on-site GPU Kubernetes for steady load, GCP VM workers for bursts, **cutting per-run cost** and keeping proprietary data on site. Built the full stack: Go backend, React frontend, containerized delivery.
- Built a **validation framework** scoring millions of runs against explicit metrics, wired into CI for every change. **Replaced thousands of engineer-hours** of manual review; evidence base for T2's **safety certification**.

Datra AI

Technical Co-founder

Remote
Feb. 2025 – Sep. 2025

- Co-founded an **LLM product** for Shopify merchants. Owned the architecture end to end (Go, React, PostgreSQL, AWS) and **managed two developers**.
- Designed the **RAG pipeline**: merchant data embedded into pgvector, retrieval-grounded prompting, and a **labeled test set** to measure answer quality and catch hallucinations before release.
- **Evaluated OpenAI and Claude models** per task on cost, latency, and quality; routed each workflow to the cheapest model meeting its bar, providers kept **swappable**.

Mujin, Inc.

Backend Software Engineer

Tokyo, Japan
Sep. 2022 – May 2025

- Built **live streaming and playback for 100+ cameras under 50 ms** end-to-end latency with WebRTC, FFmpeg, and Go, chosen after benchmarking RTSP and HLS.
- Developed a **network discovery service** in C++ locating Ethernet/IP robots and cameras within seconds; extended C++/Python **real-time robot control systems**.

Open-Source Projects

PcapPlusPlus

- **One of five core maintainers** since 2024 for a **3.1k-star** multi-platform C++ packet-processing library: performance, CI/CD, protocol support.

solvcon

- **Second-largest contributor (255 merged PRs, 67k lines)** to a C++/Python numerical toolkit: SIMD array kernels, time-series and MCAP/ROS 2 ingestion, and the Pilot GUI. [PRs]
- Built the **AI agent subsystem**: one interface over Claude, Codex, and OpenAI-compatible backends, **sandboxed** bounded-loop execution, and tool calling that drives the GUI. Presented at **PyCon JP 2024**.
- Wrote the project's **agent governance**: coding style guides for agents, PR protocol skills, sandbox pinning, and **three-platform CI** with sanitizers and static analysis gating every merge.

Education

National Yang Ming Chiao Tung University (NYCU)

M.S. in Computer Science and Engineering

Hsinchu, Taiwan
Sep. 2019 – May. 2022

- GPA: 4.11/4.3. Thesis: **Offworker: An Offloading Framework for Parallel Web Applications**, published in **WISE 2022** (top-tier conference).
- **Best Master's Thesis Award**, Institute of Information & Computing Machinery, Taiwan (2022; one of 13 awardees).

National Taiwan University (NTU)

B.S. in Bio-Industrial Mechatronics Engineering

Taipei, Taiwan
Sep. 2014 – Jun. 2019

Skills

Programming	Proficient: Python 3, C++11/14/17, Go; Experience: TypeScript, JavaScript, Bash
AI / LLM	LLM application architecture, RAG, pgvector, prompt engineering, model evaluation, OpenAI/Anthropic APIs, coding agents
Cloud / Network	Kubernetes (on-prem GPU), GCP, AWS, Docker, Linux, CI/CD, PostgreSQL, Ethernet/IP, PcapPlusPlus, ZMQ, WebRTC, Git
Evaluation/Data	Evaluation pipelines, metrics and dashboards, regression testing, time-series processing, MCAP, ROS 2, pybind11
Languages	Mandarin Chinese (Native), English (Business), Japanese (Limited Conversational)
